

August 25, 2022

To: SRC Members

From: Jon Samet

Subject: Update

After discussions with Chris Urbina, we decided to cancel the August 23 SRC meeting and provide this written progress report instead. We are nearing the end of updating the search, completing the extraction of data, and refining the Tableau database for displaying the evidence map. The attached document describes the flow and status of the literature review to the present, including the identification of 5701 additional reports. It also describes the work that remains to be done, which we estimate will require about a month more. The ensuing phase of the work will involve exploration of the extracted data using the evidence map and a determination as to the scope of evidence on key questions and the potential for carrying out systematic reviews.

Sincerely,

Jonathan M. Samet, MD, MS  
Dean and Professor
