

# Primary Care Research Fellowship

ACCORDS – University of Colorado

## Applications OPEN NOW for July 2023 Start!

With funding provided by HRSA's *Ruth L. Kirschstein National Research Service Award Institutional Research Training Grant*, the Fellowship is a collaborative training program between the University of Colorado Anschutz Medical Campus (CU-AMC) and affiliated institutions: [Kaiser Permanente of Colorado](#) (KPCO) and [Denver Health](#) (DH). **For the 2023 cycle, we will seek to enroll two MDs to become primary care research leaders addressing the nation's primary care health delivery challenges.**

The Fellowship is built upon the extensive mentorship experience of Dr. Allison Kempe (Director) and the mentorship team, a curriculum developed over many years of successfully training primary care researchers, and strong methodological expertise in 5 key proposed areas of emphasis:

1. Dissemination and Implementation (D&I) Science
2. Economic analysis to assess value-based care
3. Community-based participatory research (CBPR)
4. Health equity
5. Mixed methods/qualitative methods

Trainees will benefit from the breadth of primary care research settings including practice-based research networks (PBRNs), an academic center (CU-AMC), an integrated delivery system (KPCO), and a nationally renowned safety net system (DH). In these varied settings, trainees will develop the skills needed to conduct innovative research that improves the quality of primary care delivery.

ACCORDS will train **eight** fellows over five years, with the majority completing in two years, but with the option for a third year for some. Trainees will be able to get a Master's degree and/or a certificate in D&I Science, completing mini-courses to supplement their coursework in the areas of emphasis as well as a career development curriculum. They will receive intensive mentorship from a primary mentor as well as a mentorship team and will complete 1-2 research projects leading to publication. They will take an intensive grant-writing class and write a grant proposal focused on extension of their research project.

We will begin reviewing applications on June 1st 2022, for a start date of July 1st, 2023. Early submission of materials is encouraged, as we may choose to take candidates on a rolling basis.
