

Indigenous Early Relational Wellbeing Practices – Family (IERWP-Family)

This version is tailored for Tribal communities in the
Southwestern Desert Region

A Measure of Indigenous Early Relational Wellbeing Practices for Families

---

This survey was developed to understand practices that support relational wellbeing among Indigenous children from prenatal to age 5 years. It is intended to be completed by parents or primary caregivers of an Indigenous (American Indian/Alaska Native) child or children aged 5 and younger who is or are enrolled in the [LOCAL PROGRAM]. This includes pregnant or expecting parents enrolled in home visiting. By primary caregiver, I mean someone who plays an active role in raising or caring for a child or children. **If you are not a primary caregiver, please do not complete this survey.**

When responding, please think about your family and the children in this age group, as well as their experiences and connections with family, multiple generations, community, and the environment. Experiences may include those that happen with family, in an early childhood program, in the community, or in other settings.

- Start here -

First, we'd like to know a little about you and your child or children.

1. Please share the ages of any children in your family who are enrolled in the [LOCAL PROGRAM]. **You may select more than one answer.**

   - ☐ Cousin
   - ☐ Niece/Nephew
   - ☐ Friend
   - ☐ Other please specify relationships? _____
   - ☐ No one else plays an active role in raising or caring for this child or these children.

Next, we'd like to know a little about your child or children's experiences and connections with family, multiple generations, community, and the environment. We'll ask you to respond using a visual response scale that shows different stages of connection with each practice – from fertile soil to sharing seeds with others.

Each stage is valuable and unique to every family. Please take a moment to look over these different response options, as you'll use these options to respond to each question in the survey.

Many thanks!

You have finished this survey on practices that support relational wellbeing among young Indigenous children.

About the Visual Response Scale

This survey was developed with a Community of Learning comprised of Tribal early childhood practitioners, researchers, and funders. We collaborated with Chiffon Lark, an Indigenous artist, illustrator, and children's book author, to show different stages of connectedness with relational practices. Every stage is valuable and experiences are unique to each family, child, and community. We think of engaging in these relational practices as "planting seeds of connectedness" that help young children understand who they are, where they come from, and how they belong. Here are some stories behind each picture.

Southwestern Desert

Fertile Soil
A female white-tailed deer and her offspring aerate the ground during a heavy rainfall.

Gathering Seeds
A family of quail feast on poppy seeds and prickly pear cactus seeds, caching them with their feet.

Sharing Seeds
Two javelina enjoy ripe saguaro fruit with two mourning doves with the adult saguaro standing tall.

Growing Strong Roots
A prickly pear cactus grows strong while a desert tortoise rests underground beneath its roots.

Planting Seeds
A kangaroo rat caches wild sunflower and saguaro seeds in the desert.
